NANOSCALE ARCHITECTURE

The role of proteins in diatom silicon biomineralization

The research reported in this thesis was performed at the Department of Marine Biology, Centre for Ecological and Evolutionary Studies, University of Groningen, PO Box 14, 9750 AA Haren, The Netherlands.

This research was supported by the Technology Foundation STW, applied science division of NOW and the technology program of the Ministry of Economic Affairs (grant Gfc4883).

Cover: Bright field images and visualization of the valve by the fluorescent probe PDMPO of *Navicula salinarum*.

Lay-out and figures: Dick Visser

Photo's: Elisabeth J Middel-Minnema (pages 7, 21, 35, 55, 85, 91)

Printed by: Van Denderen b.v., Groningen

ISBN: 90 367 2597 6

RIJKSUNIVERSITEIT GRONINGEN

NANOSCALE ARCHITECTURE

The role of proteins in diatom silicon biomineralization

PROEFSCHRIFT

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 16 juni 2006
om 14:45 uur

door

Sandra Hazelaar

geboren op 21 november 1975
te Sneek

Promotores: Prof. dr. W. W. C. Gieskes
Prof. dr. Ir. H. J. W. de Baar

Copromotor: Dr. ing. E. G. Vrieling

Beoordelingscommissie: Prof. dr. L. Dijkhuizen
Prof. dr. W. E. G. Müller
Prof. dr. R. A. van Santen

Contents

Chapter 1	Introduction	7
Chapter 2	Possible role of ubiquitin in silicon biomineralization in diatoms: identification of a homologue with high silica affinity	21
Chapter 3	Ubiquitination of cell wall associated proteins during valve formation of <i>Navicula pelliculosa</i> (Bacillariophyceae): implications for micromorphogenesis	35
Chapter 4	Monitoring rapid valve formation in the pennate diatom <i>Navicula salinarum</i> (Bacillariophyceae)	55
Chapter 5	<i>Thalassiosira pseudonana</i> 's ferredoxin-NADP reductase: a homologue of carbonic anhydrase and sponge silicase lacking action on solid silica	63
	Summary	85
	Samenvatting	91
	Dankwoord	99
	List of publications	101
